

Estimated groundwater flux, 2019: Discharge

Title	NZGroundwaterDischarge_ProbabilityClasses.tif											
Creator	Empty											
Publisher	Empty											
Description	<p>A national groundwater model (NWT) was used to estimate the probability of groundwater discharging to the surface and separated into classes to encompass the uncertainty of the dataset.</p> <table><thead><tr><th>Groundwater discharge class</th><th>Description</th></tr></thead><tbody><tr><td>None</td><td>The NWT model never encountered groundwater discharge</td></tr><tr><td>1: Low</td><td>A low probability of groundwater discharge; the NWT model has encountered discharge a few times (lower than the 25th percentile).</td></tr><tr><td>2: Medium</td><td>A medium probability of groundwater discharge; the NWT model has encountered discharge relatively often (in between 25th and 75th percentile).</td></tr><tr><td>3: High</td><td>A high probability of groundwater discharge; the model has encountered discharge very often (higher than 75th percentile)</td></tr></tbody></table> <p>Where reference to the data is to be included in a reference list the following citation is suggested: Westerhoff R, Dark A, Zammit C., Tschritter, C., Rawlinson, Z., 2019. New Zealand Groundwater Atlas: Groundwater Fluxes. Lower Hutt (NZ): GNS Science. Consultancy Report 2019/126.</p>		Groundwater discharge class	Description	None	The NWT model never encountered groundwater discharge	1: Low	A low probability of groundwater discharge; the NWT model has encountered discharge a few times (lower than the 25th percentile).	2: Medium	A medium probability of groundwater discharge; the NWT model has encountered discharge relatively often (in between 25th and 75th percentile).	3: High	A high probability of groundwater discharge; the model has encountered discharge very often (higher than 75th percentile)
Groundwater discharge class	Description											
None	The NWT model never encountered groundwater discharge											
1: Low	A low probability of groundwater discharge; the NWT model has encountered discharge a few times (lower than the 25th percentile).											
2: Medium	A medium probability of groundwater discharge; the NWT model has encountered discharge relatively often (in between 25th and 75th percentile).											
3: High	A high probability of groundwater discharge; the model has encountered discharge very often (higher than 75th percentile)
