Abstract

"This data identified areas in the South Island that have been classified as being the most productive for growing food. It supports most crops across New Zealand. Expanding lifestyle blocks and urban areas reduce the availability of high-class land for commercial crop growing, and this land is unlikely to be returned to primary production. This affects our commercial food-production capacity. This data set relates to the ""High-class land for food production"" measure on the Environmental Indicators, Te taiao Aotearoa website."

Statement

Source: Landcare Research Method: High-class land is mapped by combining land use capability (from the New Zealand Land Resource Inventory) with thresholds for temperature, annual rainfall, slope, and 10 soil properties (Webb et al, 1995).
