Abstract

New Zealand's four million km² marine environment is diverse, with a range of coastal habitats and offshore seabed environments. There are also many marine species unique to New Zealand. Marine protected areas conserve or manage some of these unique habitats and species, while a range of other tools also provide marine protection. We report on the area covered by these tools as an indirect measure to understand the state of the marine environment. Marine mammal sanctuaries are one of the marine protection tools used. They are designed to protect New Zealand's unique range of marine mammals by reducing harmful human impacts, particularly in vulnerable areas such as migratory routes and breeding grounds. Each marine mammal sanctuary has a specific set of restrictions based on the species that occupy, or pass through that particular area.

Statement

Source: Department of Conservation Method: Protection in the marine environment is a conservation tool where human activity is restricted to varying degrees. We report on the extent and location of protection in the marine environment in relation to biogeographic regions (areas defined by the geographical distribution of animals and plants; Department of Conservation, 2014). For further information refer: Other marine protection: <http://www.doc.govt.nz/nature/habitats/marine/other-marine-protection/>
