## Groundwater quality, trend, 1999-2018

Title	Groundwater quality, trend, 1999-2018
Publisher	New Zealand's Environment Reporting Series: The Ministry for the Environment and Statistics New Zealand
Description	This indicator measures groundwater quality in New Zealand's aquifers and how it is changing over time, based on measurements made at monitored sites. We report on nitrate-nitrogen, ammoniacal nitrogen, dissolved reactive phosphorus, chloride, conductivity and Escherichia coli (E. coli) including: - trends in concentrations for 10-year (2009-18) and 20-year (1999-2018) periods. More information on this dataset and how it relates to our environmental reporting indicators and topics can be found in the attached data quality pdf.
