

Landings from stocks meeting or exceeding performance thresholds (2009–14)

Title	Landings from stocks meeting or exceeding performance thresholds (2009–14)
Publisher	New Zealand's Environment Reporting Series: The Ministry for the Environment and Statistics New Zealand
Description	Our fish stocks are affected by commercial, customary, and recreational fishing, and environmental pressures (eg ocean temperature, acidity, and productivity). The Ministry for Primary Industries uses three performance measures to assess influences on fish stocks: a soft limit (below which a rebuilding plan is required), a hard limit (below which closing a fishery should be considered), and an overfishing threshold (where the rate of extraction is higher than the rate of replenishment). This dataset relates to the "State of fish stocks" measure on the Environmental Indicators, Te taiao Aotearoa website.
