Ozone hole (1979–2014)

Title
Ozone hole (1979–2014)

Publisher
New Zealand's Environment Reporting Series: The Ministry for the Environment and Statistics New Zealand

Description
Ozone protects the Earth from harmful levels of UV radiation. The ozone hole is an area of reduced stratospheric ozone that forms over Antarctica each spring, due to ozone-depleting substance. Reporting on the state of the ozone hole provides important context for the state of ozone concentrations globally. This dataset relates to the "Ozone hole" measure on the Environmental Indicators, Te taiao Aotearoa website.
