

## Water physical stocks by region (1995–2014)

### Title

Water physical stocks by region (1995–2014)

### Publisher

New Zealand's Environment Reporting Series: The Ministry for the Environment and Statistics  
New Zealand

### Description

New Zealand is a water-rich country. Water is found in a network of waterways and lakes, as ground water, in glaciers, and in the soil and plants. Changes in temperature and precipitation patterns affect our water stocks, for example leading to low flows or floods. Water physical stocks show how climate changes can impact on our environment, its ecosystems, and ultimately our lifestyles. Further information can be found in: Collins, D, Zammit, C, Willsman, A & Henderson, R (2015) Surface water components of New Zealand's National WaterAccounts, 1995-2014. Prepared for Ministry for the Environment May 2015. Available at <https://data.mfe.govt.nz/x/tHzLff> on the Ministry for the Environment dataservice (<https://data.mfe.govt.nz/>). This dataset relates to the "Water physical stocks: precipitation and evapotranspiration" measure on the Environmental Indicators, Te taiao Aotearoa website.
