

Freshwater fish observational data, 1977-2015

Title

Freshwater fish observational data, 1977-2015

Publisher

New Zealand's Environment Reporting Series: The Ministry for the Environment and StatsNZ

Description

Freshwater fish are an important component of freshwater ecosystems, have intrinsic biodiversity values and are a valued resource for Māori, recreational and commercial fishers. The presence or absence of a fish species can be affected by changes in catchment land cover and land use, in-stream habitat, fish passages (routes for moving up and down waterways), pests, and contaminants. The file contains the information associated with each record in the New Zealand Freshwater Fish Database used in the report, and the associated River Environment Classification information of the location of the observation.
