Trends in global and New Zealand temperature anomalies, 1909–2016

Title

Trends in global and New Zealand temperature anomalies, 1909–2016

Publisher

New Zealand's Environment Reporting Series: The Ministry for the Environment and Statistics
New Zealand

Description

This dataset contains trends in temperatures anomalies from NIWA's 'seven-station' temperature series and three global temperature series. Trends were assessed using linear regression at the 95% confidence level. More information on this dataset and how it relates to our environmental reporting indicators and topics can be found in the attached data quality pdf.
