Change in farm size, 2002-16

Title	Change in farm size, 2002-16
Publisher	New Zealand's Environment Reporting Series: The Ministry for the Environment and Stats NZ
Description	The area of farms involved in agricultural activities, and how this is changing, is important because agricultural activities can affect soil health and water. Agricultural activities include beef and sheep, dairy, arable, horticulture, deer, pigs, and other livestock.
