Agricultural and horticultural land use, 2002–16

Title

Agricultural and horticultural land use, 2002–16

Publisher

New Zealand's Environment Reporting Series: The Ministry for the Environment and Stats NZ

Description

Dominant land uses in New Zealand include conservation (eg national and forestry parks), forestry (eg for timber resources/wood supply), urban (eg built up areas and open parkland), and agriculture and horticulture. Each land use places different pressures on the land and on receiving environments such as waterways. These pressures can be both positive (eg increased productivity) and negative (eg biodiversity loss and reduced functioning of ecosystems). This measure reports on agricultural and horticultural land uses by region.
